Common Error Responses

Below are the most common error responses returned by the API, along with their descriptions to facilitate troubleshooting:

Invalid Username/Password

```
{
  "result": "error",
  "message": "Invalid Username/Password"
}
```

Description: The provided username or password is incorrect. Ensure that `goUser` and `goPass` are valid credentials.

Invalid Response Type

```
result=error;message=This API function only accepts XML or JSON value on responsetype
```

Description: The `responsetype` parameter must be either `json` or `xml`. Double-check the parameter value in your request.

Missing Required Parameters

```
{
  "code": "40001",
  "message": "Error: Missing required parameters"
}
```

Description: One or more required parameters are missing from the request. Verify that all required fields are correctly populated.
